DETAILED ACTION

Note that prior to action on the merits, claims 19-26 have been renumbered as 19-26 as two claim 19's existed and no claim 26 existed in the original claims.

Election/Restrictions

Applicant's election with traverse of Group I. claims 1-19 in Paper No. 8 is acknowledged. Claims 1-20 will be treated on the merits (see above note). The traversal is on the ground(s) that there is no serious burden on the Examiner. This is not found persuasive because the fields of search are not coextensive and the inventions are patentably distinct.

The requirement is still deemed proper and is therefore made FINAL.

Claims 21-32 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in Paper No. 8.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3762

Claims 1-5 and 17-20 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Obel et al., US-5199428. Note that the T-2 stimulation rate in Obel is regulated by venous oxygen saturation which clearly has an effect on heart contractility. See, for example, column 2 @ 15-20. The optional "burst" mode at column 9 lines 9 et seq. would read on the claimed intermittent function. As to Claim 17, "tachyarrhythmia" would in essence be related to heart contractility in the broadest sense.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

Claims 6-12 rejected under 35 U.S.C. 103(a) as being unpatentable over Obel et al. as applied above. Although Obel is silent to the exact stimulation frequency,

amplitude, etc., they do state that these variables are programmable by a physician. To choose parameters in the ranges claimed in order to optimize stimulation efficacy would have amounted to an obvious design expedient.

Allowable Subject Matter

Claims 13-16 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Zabara and Kievel et al. stimulate the sympathetic chain and effect contractility.
